

# Scaffolding, Update

## Description

There are several risks associated with assembling a scaffold and this practice requires advanced technical knowledge. Regulatory provisions require that scaffolding must be erected by qualified personnel.

## Target Audience

Workers having to assemble modular or metal frame scaffolding of less 18 metres (60 ft).

**Important note !** Please note that the employee must have completed the initial training within the last three years in order to complete this refresher training course. Additionally, in order for the refresher training to be entered into Cognibox, the initial training must have been previously entered.

## Objectives

- Be able to assemble and dismantle a scaffold;
- Know the rules and standards that apply to scaffolding;
- Be able to inspect a scaffold.

## Contents

- Regulations and standards;
- Types of scaffolding (in particular, modular and metal frame);
- Principle of assembly;
- Scaffold risks: intrinsic and extrinsic;
- Stability and anchoring;
- Access;
- [Protection from falling](#);
- Inspection.

## **Educational approach**

Presentation, interactive activities, video and practical exercises (assembly of three sections of a metal frame scaffold—modular on request).

### **Note**

Safety boots, safety glasses and gloves are required for this course.

## **Duration**

Between 4 and 8 hours (depending on number of participants, maximum 10).
