

Alcoa Canada

Alcoa employs approximately 2,500 people in Canada, where its operations are located in four facilities and plants in Quebec: the Baie-Comeau, Bécancour (ABI) and Deschambault aluminum smelters, and the Canadian headquarters in Montreal. Together, Alcoa's aluminum smelters in Canada have an annual production capacity of nearly one million metric tons of plate, mainly for rolling mills for the manufacture of packaging and bodywork sheets; T-ingots for foundries for the manufacture of castings, particularly for the automotive sector; and billet for extruders for the manufacture of profiles for the transportation and construction industry. To access an Alcoa site, you must complete 2 mandatory training courses:

- 1. Alcoa Canada Corporate-Contractor Orientation, Part 1 of 2**
- AND**
- 2. Site-specific training, part 2 of 2**
